

Summary

[Part I]

- Conventional role of the Golgi : trafficking, PTM(e.g. glycosylation)
- Unconventional role of the Golgi : unconventional secretion, DNA damage sensing (e.g. DNA-PK, GOLPH3), Signaling Hub (e.g. mTORC1, GRASP55, KIT), Cancer metastasis, Innate immunity (e.g. NLRP3 inflammasome)

[Part II]

- Golgi alteration in Cancer, Aging, Alzheimer's disease
 - Golgi morphodynamics : Golgi condensation vs. Golgi fragmentation
 - The pathological glycation and generation of toxic proteins
 - The Golgi Stress Response (GSR) and Golgi apparatus-associated protein degradation (EGAD, GOMED)
- The Golgi outpost
